

Ru- ne pumpe Hand pumps

KLIPNE, VISOKOG PRITISKA, ZA OP[TE I POSEBNE NAMENE
PISTON PUMP, HIGH PRESSURE, FOR GENERAL AND SPECIAL PURPOSE

- Ru- ne pumpe se primenjuju u raznim sistemima naj- e{ }e kao ure | aji za rezervu kada motorne pumpe otka` u, ali ima i sistema gde su to jedini izvori hidraull- ke energije.
- Pumpe su u ve}ini slu- ajeva opremljene odgovaraju}im ventilima za ograni- enje pritiska i rezervoarima za ulje a neka od re{enja imaju jedan ili dva razvodna ventila. Tako je sa ovim ru- nim pumpama, uz dodatak cilindra kao izvr{nih ure | aja mogu}e realizovati kompletan hidrauli- ki sistem. Postoje dva tipa pumpi:
 - jednostepene pumpe sa protokom (usisavanje + potiskivanje) u toku jednog ciklusa
 - dvostepene pumpe koje ostvaruju dva protoka u toku jednog ciklusa zavisno od pritiska
- PPT ru- ne pumpe mogu da se koriste u sistemima sa jednosmernim ili dvosmernim cilindrima
- Ru- ne pumpe obezbe | uju visoku pouzdanost u radu
- Pumpe su proizvedene od visoko kvalitetnih materijala sa odgovaraju}om termi- kom obradom i galvanskom za{titom
- Radna te- nost:
 - mineralno hidrauli- ko ulje
 - viskozitet 20 ... 400 mm²/s
 - temperatura -20 do +70°C

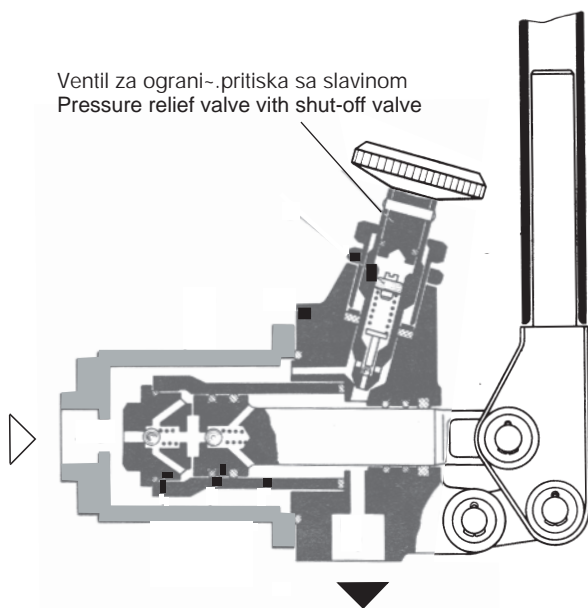

- They are found in a number of systems, mainly as a substitute in case of a motor pump failure, but there are also systems in which they are the sole source of energy
- Most of pumps include appropriate pressure relief valves and working liquid tanks, and some types include one or two directional valves. Thus, it is possible to construct a complete hydraulic system including a hand pump and cylinders as executors
- Types of the pumps:
 - one stage pumps with flow (suction + pressure) at one cycle
 - two stage pumps with two flows at one cycle, depends of pressure
- PPT hand pumps can be applied to system including single - acting of double - acting cylinders
- Hand pumps provides for high operating reliability
- These pumps are manufactured from high quality materials, adequately heat treated and electro - plated.

- Working fluid:
 - mineral hydraulic oil
 - viscosity 20 ... 400 mm²/s
 - temperature -20 to +70°C

PRESEK - PRINCIP RADA (ru- na pumpa 40-400/2)
SECTION - MODE OF OPERATION (hand pump 40-400/2)

Ventil za ograni- . pritiska sa slavinom
Pressure relief valve with shut-off valve
